

TULSA RIG IRON

Engineered Solutions for Energy Contractors

Proudly made in the USA

MCS Series Mud Recycling Systems

Quality. Reliability. Integrity.

As THE authority on mud cleaning systems, what sets us apart?

- As THE authority on mud cleaning systems, what sets us apart?
- We offer the best value on mud recycling systems for the drilling and pipeline markets. Period.
- As a pioneer of packaged mud recycling systems for the HDD market, our systems are built with simplicity and durability in mind. There are hundreds of first generation TRI mud systems still in use around the globe.
- Tulsa Rig Iron systems are manufactured in our state-of-the-art facility in Kiefer, Oklahoma. We outsource very few components for our systems, everything else is made right here in Kiefer. This allows us to control the high quality of our products. Our team consists of true craftsmen that take great pride and demand perfection from their work.
- We have been doing this since 1987, longer than any of our competitors. We're here for you today, and we'll be here for you tomorrow. We're a family owned business that listens to our customers, with no public shareholders to answer to.
- Our product designers have decades of in-field operation of our type of equipment. Our products are designed to be simple to operate and maintain. There are many gimmicks on the market to consider. Intricate electronics are not conducive to the harsh working environments that HDD contractors encounter. Our systems are designed so your normal jobsite mechanic can perform normal maintenance and repair easily.
- Quality with simplicity in design is what has set Tulsa Rig Iron apart for over 30 years!
