

# TULSA RIG IRON

Engineered Solutions for Energy Contractors

**Proudly made in the USA**

## LS Series Shakers

**Quality. Reliability. Integrity.**

### Benefits of Tulsa Rig Iron shakers:

- Our industry-standard Tulsa Rig Iron shakers are manufacturing in-house for strict quality control monitoring.
- Our systems utilize standard pre-tensioned flat screens with high grade steel frames for durability. Flat screens yield longer life due to cuttings being distributed across the entire surface area.
- Linear motion technology provides excellent solids conveyance when the screen deck is positioned with a positive deck angle, allowing cuttings to remain longer on the screens if needed and travel upwards to the discharge chute.
- Air bag isolation points to minimize component and worker fatigue.
- Ultra High Molecular Weight Polyethylene wedge blocks lock screens securely in place, allowing for quick easy screen changes.
- Optional Adjustable While Drilling feature allows the angle of the screen basket to be easily adjusted from 1 to 5 degrees (positive or negative) from either side using a simple to use hand operated adjustment.
- Available in desanding, desilting, and single or dual deck scalping configurations. Desanding and desilting configurations feature our high efficiency designed manifolds.
- Cost effective- you're buying direct from the manufacturer!
